

EPID6002 Selected Topics in Epidemiology

(1.5 credits)

Course Coordinator: Prof. Jean Kim

Course Description

The course involves a series of guest lecture seminars in which methodological aspects of various areas of epidemiological research are discussed and elaborated.

Learning Outcomes/Objectives

Students will become familiar with the methodological and substantive issues of conducting epidemiological investigations in various subject areas. The course is structured as a series of seminars with interactive discussion. Each session will summarize the major methodological considerations of epidemiological research on the given topic so that students can critically examine the literature.

Students will be asked to read scientific papers that illustrate concepts in class. Students should be able to understand the major data collection and data analysis issues of the various types of epidemiology presented.

Course Schedule

Session	Date	Time	Venue
